# PE-21

## Polyester Urethane with Moisture-Cure Reinforcement

**PE-21 IS A UNIQUE POLYESTER URETHANE WITH A COMBINED “MOISTURE-CURE REINFORCEMENT PROCESS THAT RESULTS IN THE MOST DURABLE AND CHEMICAL RESISTANT COATING ON THE MARKET TO DATE.**

### WHERE TO USE

- 100% Solids Epoxy Coatings
- Moisture Barrier Coatings
- Water-Based Epoxy Coatings
- Polyaspartic Coatings
- Urethane Coatings
- Rapid Cure Coatings
- Acrylic Roof Coatings

### KEY PRODUCT FEATURES

- Extreme chemical resistance
- Long-term gloss appearance
- Depending on coating thickness and environmental conditions, up to 20 year performance life

### EXCEPTIONALLY CHEMICAL RESISTANT & LONG-LASTING

Formulated by Qualex® over two decades ago, this technology was developed for the airplane and aerospace industry to **resist a very aggressive hydraulic fluid** (Skydrol) used in airplanes. It was notorious for destroying airplane hangar floors.

PE-21 utilizes a very strong Polyester Urethane technology while simultaneously pulling moisture out of the air, and cure and strengthen for up to two weeks after its applied.

Even though the surface is ready for full traffic in 48-72 hours, PE-21 will continue to crosslink over 14 days.

### RECOMMENDED APPLICATION

At 60% solids by design, it's a thinner product and ideally applied with at least 2 coats. PE-21 **will last and maintain** a “like-new” gloss for a minimum of 10-20 years. Since you can mix PE-21 into any color, **the application and use is unlimited.** PE-21 is also an excellent general purpose concrete sealer for stamped, color and decorative applications.
